

Automobile Industry has given new dimensions to livelihood

Today Automobile company is ruling all over the world as the best business. The journey of Automobile was started early in 1769 and now in 2014 the Automobile has come with lots of new idea and modern automobile. Today Automobile is the need and demand of modern world. Automobile started there life with Steam Engine and now there is lots of different type of transport means for us. Automobile has worked on many types of machine like we have electric engine, petrol engine and diesel engine. Automobile has work so hard to save our time by having many means of transportation.

New modern Automobile is mean for their performance and speed. In early time Automobile has small CC

engines but in 2014 it has lots of different. From 50 CC it has come to 1300 CC for bike and in four wheeler 100 cc has become 2400 or more than it. The time which was taken before in early times to go to other place from one place but now it is not like that everything has change less time with fair money amount we can use the means transport in our daily routine.

Automobile has work more better than how world was expecting from them. Automobile is like we use it for our work and enjoyment.

There is one thought

give by the automobile legend name as B.C Forbes, they says like that "A

Business like an automobile, has to be given in

Mr. Sandeep Saran

FYBBA, B.P.College of
Business Administration
Kadi Sarva Vishwavidyalaya,
Gandhinagar

order to get result" and this is term which every automobile company is using

for their success. Today we have many foreign and local companies of automobile like Mercedes, BMW, Jaguar, Bentley, R.R, Ferrari, Lamborghini, Suzuki, Hyundai, Honda, Mahindra, Toyota and many others. World use to say long live automobile. The development of the automobile has con-

tributed to changes in employment distribution, shopping patterns, social interactions, manufacturing priorities and city planning increasing use of automobiles has reduced the roles of walking, horses and

railroads. In addition to money for roadway construction, car use was also

encouraged in many places through new zone law that required that any new business construct a certain amount of parking based on the size and type of facility.

The effect of this was to create a massive quantity of free parking spaces and to push businesses further back from the road. Many shopping centers and suburbs abandoned sidewalks altogether, making pedestrian access dangerous. This had the effect of encouraging people to drive, even for short trips that might have been walk able, thus increasing and solidifying auto-dependency.

As the result we can say that automobile has change the world by having their contribution in business, culture, economy, wealth and safety.
